## Overview of Tippah County Hospital

- Tippah County Hospital is a county-owned Critical Access Hospital located in Ripley, Mississippi. Tippah County Hospital is comprised of Tippah County Hospital (25-bed), Tippah County Health & Rehab (40-bed), Tippah County Health Clinic, and Tippah County Wellness Center. Tippah County Hospital serves Tippah County and many of the surrounding communities/counties. Tippah County Hospital admitted its first patient in April of 1950.
- Tippah County Hospital and Tippah County Health and Rehab are a county owned 25-bed Critical Access Hospital and 40-bed nursing home that provides acute care, swing bed, emergency medicine, and related OP ancillary services to residents of Ripley, Mississippi and surrounding communities.

## Growth and Opportunities

- TCH was designated as a Critical Access Hospital (CAH) on January 1, 2015. CAH allows for an acute in-patient stay of 96 hours and higher reimbursement for Swing Bed patients.
- TCH and TCH&R also started a new Quality Program in 2015. We have achieved 4-star rating and number one in CAUTI Rating.
- The 340B Drug Pricing Program allows CAHs to benefit from reduced drug costs and profit from contracted retail pharmacy program revenues. The intent of this program is to develop financial stability of the entity, savings for tax payers and access to affordable medications by the uninsured. The savings may be used to reduce price of drugs for patients, expand drug formularies, and expand services offered to patients. The 340B program has proved to be highly beneficial to rural hospitals with outpatient clinics.
- Senior Intensive Outpatient Program (IOP) started in December 2019. IOP is a group-based counseling center that assist the senior adult population in restoring emotional and mental well-being. The IOP is an Intensive Outpatient Psychiatric program that will be targeted to the geriatric population. The IOP will serve older adults who are experiencing a psychiatric illness. The goal of the program is to help people recover and learn ways to stay well. In the course of a day, patients attend various types of psychotherapy groups that are effective in treating emotional and psychological problems. Patients may also have individual meetings with clinical staff, including the program psychiatrist.
- Cardiac & Pulmonary Rehabilitation started in February 2020. The number one cause of death in Mississippi is heart disease; the second is cancer, with lung cancer being the number one diagnosed. Chronic Obstructive Pulmonary Disease (COPD) is a common and preventable disease that is characterized by persistent respiratory symptoms and airflow limitation. Pulmonary rehabilitation improves symptoms, quality of life, pulmonary function, and health care in patients with chronic respiratory disease. It is a comprehensive intervention based on a patient assessment followed by patient-tailored therapies that include, exercise training, education, and behavior change designed to improve the physical and psychological condition of people with chronic respiratory disease. Overall, pulmonary rehabilitation aims to improve respiratory symptoms and quality of life in daily life activities. Pulmonary rehabilitation is one of the most cost-effective therapies for individuals with a chronic respiratory disease. Cardiac rehab helps lower the risk of heart disease due to high blood pressure, high cholesterol, physical inactivity, and excessive weight, diabetes, smoking and stress. It is also beneficial for patients after surgery. Patients can experience improved outcomes and are able to manage their condition proactively when they participate in a rehabilitation program following diagnosis or surgery. Additional benefits include Decreased blood pressure, decreased dependence on medications, reduced risk of heart attack, Gradual weight loss, and improved strength and energy. The benefits to adding the services of pulmonary and cardiac rehab will be outstanding. We have a high population of older, COPD and cardiac patients that could utilize these services. The closest pulmonary rehab facility to us is in Corinth. Many of our citizens cannot make that trip 2-3 times a week. Ultimate goals for this additions of services would be to have RT staff members earn a certificate in pulmonary rehab offered by the AARC (American Association of Respiratory Care) and after a year of operation have both cardiac and pulmonary rehab certified through the AACVPR (American Association of Cardiovascular and Pulmonary Rehabilitation).
- Telehealth started in February 2020 in partnership with North Mississippi Medical Center. This program is an innovative way for specialists to see patients here at our hospital. Video equipment is used to conduct real-time exams. Anything that can be done in a specialist office can be completed right here in our hospital. We have plans to expand the Telehealth Program to the Emergency Room and our Medical/Surgical Floor.

## Services

- **Swing Bed:** Our swing bed program is staffed by RNs, LPNs, Social Services, Physical Therapy, Speech Therapy, Registered Dietician, and Occupational Therapy. Tippah County Hospital's Swing Bed Unit provides a bridge between hospital and home. Swing bed care serves patients who no longer require acute care, but still need nursing and rehabilitative care to help them recover so they can transition more easily back to the home.
- **Acute Care:** Acute Care patients generally consist of the following diagnosis: Pneumonia, Congestive Heart Failure, Urinary Tract Infections, Pyelonephritis, Kidney Stones, Bronchitis, Cellulitis, Chronic Obstructive Pulmonary Disease, Asthma, Wound Care, Pain Management, Failure to Thrive, Alcohol Detoxification, Dehydration, Gastrointestinal Problems, Diabetes, Palliative Care (End-of –Life), Non Invasive Ventilation Care (BiPAP) and other generalized medical problems.
- **Emergency Room:** Staffed with an ER provider 24 hours a day, 7 days a week. All of physicians are certified in Emergency Medicine or ATLS (Advanced Trauma Life Support). All Registered Nurses are certified in ACLS (Advanced Cardiac Life Support), PALS (Pediatric Advanced Life Support) and TNCC (Trauma Nurse Core Curriculum). TCH is a Level IV Trauma Center. Emergency Room Medical Director is Board Certified in Emergency Medicine.
- Tippah County Sports Medicine offers Speech Therapy, Physical Therapy and Occupational Therapy five days per week in an outpatient and inpatient setting.
- Tippah County Wellness Center with indoor swimming pool, fitness classes, racquet ball court, indoor and outdoor walking track and exercise equipment.
- Radiology offers inpatient and outpatient studies such as Ultrasound five days per week, MRI services on Fridays, 64 slice CAT scan, bone density studies, adult echocardiography and general radiology.
- Laboratory Department offers the following services: hematology, immunology, chemistry, blood banking, urinalysis and coagulation.
- The Respiratory Care Department staffs Registered Respiratory Care Practitioners, licensed by the Mississippi Department of Health and the National Board of Respiratory Care. Our Respiratory Therapists are BLS certified and are experienced in acute care, critical care, swing bed, nursing home, emergency settings, and are available 24/7.
- Tippah County Health and Rehab is a 40 bed facility that has access to laboratory, radiology, and respiratory therapy services as well as emergency services 24/7. TCH&R offers Skilled Nursing Care, Short-Term Rehabilitation and Long Term Care. TCH&R partners with Tippah County Rehab and Sports Medicine to provide Physical Therapy, Occupational Therapy, and Speech Therapy.
- Tippah County Ambulance Service is a hospital owned and based service and offers advanced Life Support (ALS) Service.
- Tippah County Health Clinic was opened in October 2017.

## Urban and Rural Population

This indicator reports the percentage of population living in urban and rural areas. Urban areas are identified using population density, count, and size thresholds. Urban areas also include territory with a high degree of impervious surface (development). Rural areas are all areas that are not urban. Of the report areas 22,232 population, 3,592 or 16.16% of the population is classified urban while 18,640 or 83.84% is rural.

### Children Eligible for Free/Reduced Price Lunch

Free or reduced price lunches are served to qualifying students in families with income between under 185 percent (reduced price) or under 130% (free lunch) of the US federal poverty threshold as part of the federal National School Lunch Program (NSLP).

Out of 4,012 total public school students in the report area, 2,887 were eligible for the free or reduced price lunch program in the latest report year. This represents 72.0% of public school students, which is lower than the state average of 74.0%.

## Head Start

Head Start is a program designed to help children from birth to age five who come from families at or below poverty level. The program’s goal is to help children become ready for kindergarten while also providing the needed requirements to thrive, including health care and food support.

This indicator reports the number and rate of Head Start program facilities per 10,000 children under age 5. Head Start facility data is acquired from the US Department of Health and Human Services (HHS) 2018 Head Start locator. Population data is from the 2010 US Decennial Census. The report area has a total 2 Head Start programs with a rate of 12.67% per 10,000 children under 5 years old.

## High School Graduation Rate (EdFacts)

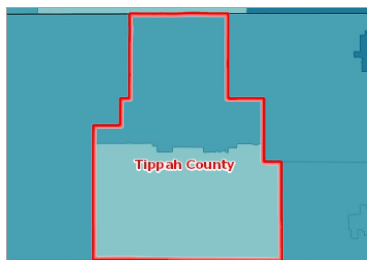

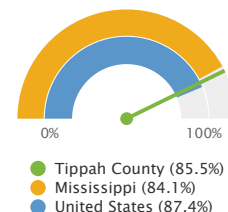

The adjusted cohort graduation rate (ACGR) is a graduation metric that follows a “cohort” of first-time 9th graders in a particular school year, and adjust this number by adding any students who transfer into the cohort after 9th grade and subtracting any students who transfer out, emigrate to another country, or pass away. The ACGR is the percentage of the students in this cohort who graduate within four years. In the report area, the adjusted cohort graduation rate was 85.5% during the most recently reported school year. Students in the report area performed better than the state, which had an ACGR of 84.1%.

## Housing Cost Burden (30%)

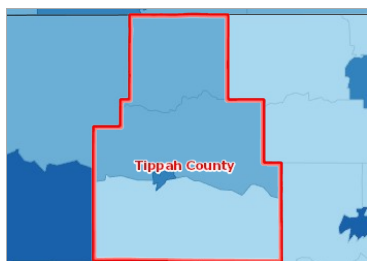

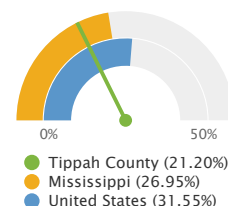

This indicator reports the percentage of the households where housing costs exceed 30% of total household income. This indicator provides information on the cost of monthly housing expenses for owners and renters. The information offers a measure of housing affordability and excessive shelter costs. The data also serve to aid in the development of housing programs to meet the needs of people at different economic levels. Of the 7,983 total households in the report area, 1,692 or 21.20% of the population live in cost burdened households.

## Insurance - Uninsured Population

The lack of health insurance is considered a *key driver* of health status.

In the report area 11.80% of the total civilian non-institutionalized population are without health insurance coverage. The rate of uninsured persons in the report area is less than the state average of 12.67%. This indicator is relevant because lack of insurance is a primary barrier to healthcare access including regular primary care, specialty care, and other health services that contributes to poor health status.

## Unemployment Rate

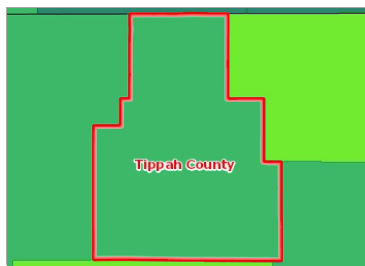

Total unemployment in the report area for the current month equals 578, or 6.4% of the civilian non-institutionalized population age 16 and older (non-seasonally adjusted). This indicator is relevant because unemployment creates financial instability and barriers to access including insurance coverage, health services, healthy food, and other necessities that contribute to poor health status.

### Air Quality - Ozone

Within the report area, 0, or 0.00% of days exceeded the emission standard of 75 parts per billion (ppb). This indicator reports the percentage of days per year with Ozone (O3) levels above the National Ambient Air Quality Standard of 75 parts per billion (ppb). Figures are calculated using data collected by monitoring stations and modeled to include census tracts where no monitoring stations exist. This indicator is relevant because poor air quality contributes to respiratory issues and overall poor health.

## Climate & Health - Drought Severity

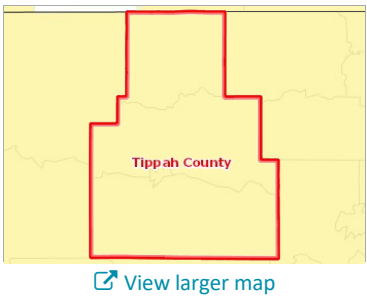

Drought is defined as a moisture deficit bad enough to have social, environmental or economic effects. The Drought Monitor map identifies areas of drought and labels them by intensity<sup>1</sup>. D1 is the least intense level and D4 the most intense. In the report area, 9.11% of weeks during the 2017-2019 period were spent in drought (any level). An additional 19.47% of weeks were categorized spent in "abnormally dry conditions" (D0) indicating that drought could occur, or that the area is recovering from drought but are not yet back to normal.

## Climate & Health - High Heat Index Days

This indicator reports the percentage of recorded weather observations with heat index values over 103 degrees Fahrenheit. The "heat index" is a single value that takes both temperature and humidity into account. The higher the heat index, the hotter the weather feels, since sweat does not readily evaporate and cool the skin. The heat index is a better measure than air temperature alone for estimating the risk to workers from environmental heat sources.

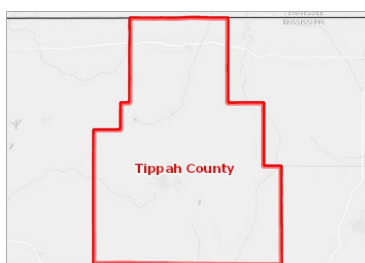

Report Area	Total Weather Observations	Average Heat Index Value	Observations with High Heat Index Values	Observations with High Heat Index Values, Percentage

## Food Access - Fast Food Restaurants

This indicator reports the number of fast food restaurants per 10,000 population. The prevalence of fast food restaurants provides a measure of both access to healthy food and environmental influences on dietary behaviors. Fast food restaurants are defined as limited-service establishments primarily engaged in providing food services (except snack and nonalcoholic

beverage bars) where patrons generally order or select items and pay before eating.

#### Food Access - Food Desert Census Tracts

This indicator reports the number of neighborhoods in the report area that are within food deserts. The USDA Food Access Research Atlas defines a food desert as any neighborhood that lacks healthy food sources due to income level, distance to supermarkets, or vehicle access. The report area has a population of 2,753 living in food deserts and a total of 1 census tracts classified as food deserts by the USDA.

## Food Access - Grocery Stores

Healthy dietary behaviors are supported by access to healthy foods, and Grocery Stores are a major provider of these foods. There are 4 grocery establishments in the report area, a rate of 1.80 per 10,000 population. Grocery stores are defined as supermarkets and smaller grocery stores primarily engaged in retailing a general line of food, such as canned and frozen foods; fresh fruits and vegetables; and fresh and prepared meats, fish, and poultry. Delicatessen-type establishments are also included. Convenience stores and large general merchandise stores that also retail food, such as supercenters and warehouse club stores, are excluded.

## Housing - Housing Unit Age

This indicator reports, for a given geographic area, the median year in which all housing units (vacant and occupied) were first constructed. The year the structure was built provides information on the age of housing units. These data help identify new housing construction and measures the disappearance of old housing from the inventory, when used in combination with data from previous years. This data also serves to aid in the development of formulas to determine substandard housing and provide assistance in forecasting future services, such as energy consumption and fire protection. There are a total 9,816 housing units in the report area, and the median year built is 1984.

## Housing - Substandard Housing

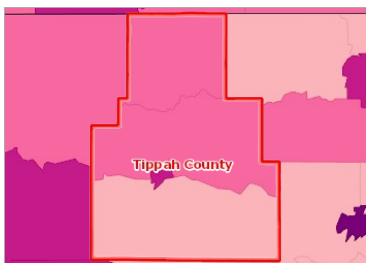

This indicator reports the number and percentage of owner- and renter-occupied housing units having at least one of the following conditions: 1) lacking complete plumbing facilities, 2) lacking complete kitchen facilities, 3) with 1 or more occupants per room, 4) selected monthly owner costs as a percentage of household income greater than 30%, and 5) gross rent as a

percentage of household income greater than 30%. Selected conditions provide information in assessing the quality of the housing inventory and its occupants. This data is used to easily identify homes where the quality of living and housing can be considered substandard. Of the 7,983 total occupied housing units in the report area, 1,915 or 23.99% have one or more substandard conditions.

### Access to Primary Care

This indicator reports the number of primary care physicians per 100,000 population. Doctors classified as "primary care physicians" by the AMA include: General Family Medicine MDs and DOs, General Practice MDs and DOs, General Internal Medicine MDs and General Pediatrics MDs. Physicians age 75 and over and physicians practicing sub-specialties within the listed specialties are excluded. This indicator is relevant because a shortage of health professionals contributes to access and health status issues.

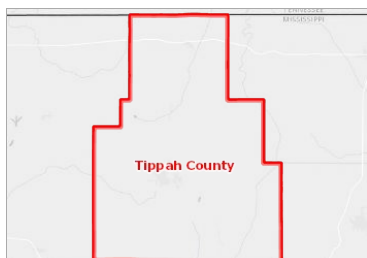

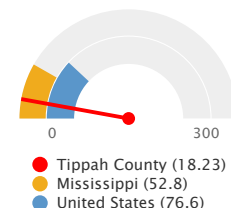

Within the report area there are 4 primary care physicians serving a population of 21,942. This means there is a rate of 18.23 primary care physicians for every 100,000 people.

## Cancer Screening - Mammogram

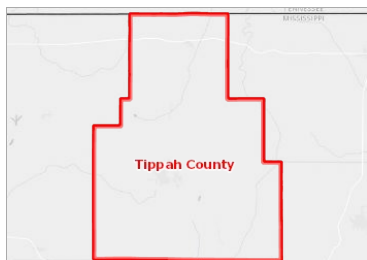

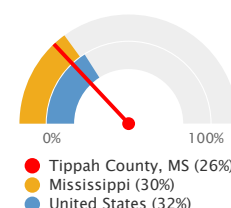

This indicator reports the percentage of female Medicare beneficiaries age 35 and older who had a mammogram in most recent reporting year. The American Cancer Society recommends that women age 45 to 54 should get a mammogram every year, and women age 55 and older should get a mammogram every other year. In the latest reporting period there were 4,748 Medicare beneficiaries in the report area, and 26% of female beneficiaries age 35 or older had a mammogram in the past year. The rate in the report area was lower than the state rate of 30% during the same time period.

## Cancer Screening - Pap Test

This indicator reports the percentage of women aged 18 and older who self-report that they have had a Pap test in the past three years. This indicator is relevant because engaging in preventive behaviors allows for early detection and treatment of health problems. This indicator can also highlight a lack of access to preventive care, a lack of health knowledge, insufficient provider outreach, and/or social barriers preventing utilization of services.

## Diabetes Management - Hemoglobin A1c Test

This indicator reports the percentage of diabetic Medicare patients who have had a hemoglobin A1c (hA1c) test, a blood test which measures blood sugar levels, administered by a health care professional in the past year. In the report area, 479 Medicare enrollees with diabetes have had an annual exam out of 544 Medicare enrollees in the report area with diabetes, or 88.1%. This indicator is relevant because engaging in preventive behaviors allows for early detection and treatment of health problems. This indicator can also highlight a lack of access to preventive care, a lack of health knowledge, insufficient provider outreach, and/or social barriers preventing utilization of services.

## Federally Qualified Health Centers

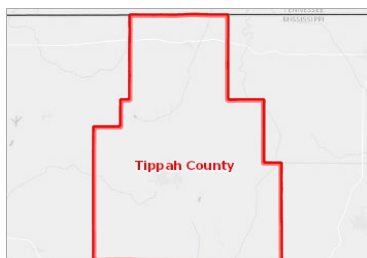

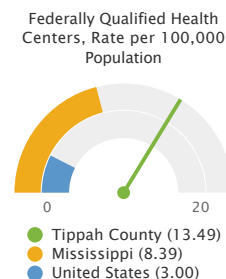

This indicator reports the number of Federally Qualified Health Centers (FQHCs) in the community. This indicator is relevant because FQHCs are community assets that provide health care to vulnerable populations; they receive extra funding from the federal government to promote access to ambulatory care in areas designated as medically underserved.

Within the report area, there are 3 Federally Qualified Health Centers. When adjusted to a standard population, there is a rate of 13.49 Federally Qualified Health Centers for every 100,000 persons.

## High Blood Pressure Management

In the report area, 17.9% of adults, or 2,943.00, self-reported that they are not taking medication for their high blood pressure according to the CDC's Behavioural Risk Factor Surveillance System (2006-2010). This indicator is relevant because engaging in preventive behaviors decreases the likelihood of developing future health problems. When considered with other indicators of poor health, this indicator can also highlight a lack of access to preventive care, a lack of health knowledge, insufficient provider outreach, and/or social barriers preventing utilization of services.

## Preventable Hospital Events

This indicator reports the preventable hospitalization rate among Medicare beneficiaries for the latest reporting period.

Preventable hospitalizations include hospital admissions for one or more of the following conditions: diabetes with short-term complications, diabetes with long-term complications, uncontrolled diabetes without complications, diabetes with lower-extremity amputation, chronic obstructive pulmonary disease, asthma, hypertension, heart failure, bacterial pneumonia, or urinary tract infection. Rates are presented per 100,000 beneficiaries. In the latest reporting period there were 4,748 Medicare beneficiaries in the report area. The preventable hospitalization rate was 6,342. The rate in the report area was higher than the state rate of 6,162 during the same time period.

## Physical Inactivity

Within the report area, 7,249 or 44.2% of adults aged 20 and older self-report no leisure time for activity, based on the question: "During the past month, other than your regular job, did you participate in any physical activities or exercises such as running, calisthenics, golf, gardening, or walking for exercise?" This indicator is relevant because current behaviors are determinants of future health and this indicator may illustrate a cause of significant health issues, such as obesity and poor cardiovascular health.

### Mortality - Motor Vehicle Crash

This indicator reports the rate of death due to motor vehicle crashes per 100,000 population, which include collisions with another motor vehicle, a nonmotorist, a fixed object, and a non-fixed object, an overturn, and any other non-collision. This indicator is relevant because motor vehicle crash deaths are preventable and they are a cause of premature death.

In the report area, there were 6 average annual deaths due to motor vehicle crashes among the total population of 22,065. The age adjusted death rate of 25.6 per every 100,000 people is greater than the state's reported rate of 23.71.

### Mortality - Pedestrian Motor Vehicle Crash

Motor vehicle crash deaths are preventable and are a leading cause of death among young persons. In the report area, there were 3 pedestrians killed by motor vehicles during the multi-year report period. The annual (crude) mortality rate for the report area is 4.5, which is higher than the state average of 4.0.

Note: Fatality counts are based on the location of the crash and not the decedent's residence.

### Mortality - Premature Death

This indicator reports Years of Potential Life Lost (YPLL) before age 75 per 100,000 population for all causes of death, age-adjusted to the 2000 standard. YPLL measures premature death and is calculated by subtracting the age of death from the 75 year benchmark. This indicator is relevant because a measure of premature death can provide a unique and comprehensive look at overall health status.

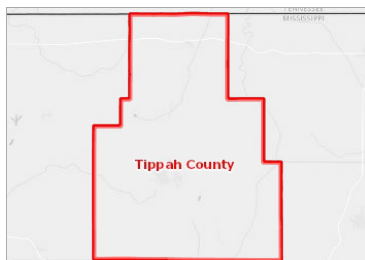

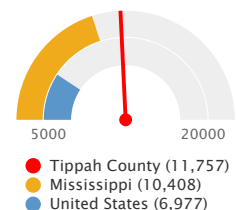

In the report area, there were 433 premature deaths, leading to the loss of 7,272 potential years of life. The rate of years lost is 11,757 per every 100,000 people, which is greater than the state's loss rate of 10,408.

## Community Benefit Plan

---

Upon completion of our CHNA, there are six main needs for our community and they are as follows:

1. Promote wellness in our community by educational opportunities on social media, events and our website.
2. Recruit more local physicians in our service area.
3. Expand our Telehealth Program to Emergency Room and Medical/Surgical Floor.
4. Decrease readmission rates and mortality rates post hospitalization for COPD and Pneumonia.
5. Start Outpatient Surgical Procedures – colonoscopies.
6. Work with community partners to reduce food insecurity.
